EDUCATION

University of East Anglia

Norwich, Norfolk

MMath Mathematics (Year 2 Average: 78%)

2024 - 2028

- Dominic Russell Award recipient - Award for exceptional efforts in assisting and engaging peers in maths
- BSc Dissertation - Homological description of representations of algebraic groups

Northgate Sixth Form

Ipswich, Suffolk

A level Maths (A), Further Maths (A), Physics (A) and Chemistry (B)

2022 - 2024

FINANCE EXPERIENCE

Oakwood ESG Student Fund

Director of Quantitative Operations

Aug 2026 - Present

- Leading the construction of a Quantitative-arm of Oakwood from the ground up, focusing on using maths and statistics to make data-driven stock evaluations
- Creating and leading intuition-first workshops on statistics and mathematical finance

Junior Analyst - Industrials Sector

Oct 2025 - May 2026

- Co-developed and presented two 10-minute stock pitches to faculty and industry professionals
- Used Python and Bloomberg Terminal for quantitative evidence, extracted risk-neutral densities from options data via Breeden-Litzenberger, which suggested that market had not yet priced in our stock's recent efforts to diversify away Industrials cyclical risk
- Built bootstrapped correlation networks against the 10 largest S&P 500 Industrials constituents to test whether our stock's sector-specific cyclical risk exposure had fallen, finding over 75% decrease in number of significant correlations

RESEARCH EXPERIENCE

Fluid Dynamics Research: Moffatt-Pukhnachev flows

UEA, School of Mathematics

Beyond steady rotation - the Moffatt-Pukhnachev Problem under different forcing protocols

Jun - July 2026

- Building directly on from a 2026 publication in the Proceedings of the Royal Society
- Concerns the mathematical study of a thin film of viscous liquid coating a cylinder, answering when the liquid detaches from the cylinder surface (blow-up) under different motion
- Analytically solved a non-linear 2D dynamical system for blow-up times at significant points, finding bounds for whole surface, thus developing strong analytical problem-solving skills

Lean-LMFDB academic workshop

Lean formalisation of Number theory and Algebraic Geometry

Jun-July 2026

- Week-long Academic workshop, collaborating with researchers in the field to develop new Lean formalisations of important number theory and algebraic geometry related to the L-functions and Modular forms database
- Contributed towards stating the Birch and Swinnerton-Dyer Conjecture in Lean by formalising theorems and definitions relating to lattices and their invariants, requiring rigorous logical reasoning skills and attention to detail

LEADERSHIP AND EXTRA-CURRICULAR

- MathSoc Vice President 26/27, London Mathematical Society (LMS) Student Rep 25/26 - Organised integration bee and successfully applied for a £300 LMS grant to organise a guest lecture at UEA attended by 80+ students
- Muslim Mentor 25/26 - Helped Muslim freshers settle into university whilst practising their faith
- Bangladesh 2.0 Initiative ROOT Mentee - Studied aspects of developmental and humanities studies, specifically regarding Bangladesh, under leading academics

SKILLS AND INTERESTS

- **Technical Skills** - Python, Excel, Matlab, Lean, Formal verification
- **Languages** - English - Fluent, Bengali (Sylheti) - Conversational
- **Interests** - Mathematical Problem-solving, Mountain Biking
